Simpro																-							low - medium
Terminus																	-						low
Terminus Extra																		-					low - medium
Voyager																			-				low - medium
Zorvec Endavia																				-			medium - high
Zorvec Entecta																					-		medium - high

 Products contain the same active ingredient or there exists a cross resistance, this means they have to be looked at as the same active ingredient in the anti resistance strategy.

 In this case the change of product also means a change of active ingredient and is in terms of an anti resistance strategy.

Generally the group of active ingredients must be changed after two treatments in a row. <sup>1)</sup> With combined fungicides the indication refers to the active ingredients with the highest risk of resistance. Source modified after FRAC.
